1) FY26 credit cost % of 6.74% = 6.10% due to new PAR + 0.64% due to increase in ECL provisioning %

Implementation of New ECL Model:

The new ECL framework introduces the following enhancements:

- **Longer historical period:** extended from 36 months to 120 months
- **Forward-looking estimates through scenario modelling:**
 - Scenario 1: Stable period
 - Scenario 2: Major external events (e.g., Demonetisation, Covid)
 - Scenario 3: Enhanced stress events (e.g., regulatory changes, weather patterns, economic outlook)
- PD and LGD are computed separately under each scenario
- Probability-weighted ECL is computed basis management & board judgement
- **Macroeconomic factors for 12-month outlook:**
 - Regression-based macroeconomic model to determine the drivers of PD
 - The predicted PD governs the permissible range of the enhanced stress weightage for the next 12-month outlook

Considering the on-going West-Asia crisis, the new ECL model incorporates a higher weightage for major external events scenario, resulting into an additional provisioning of INR 39 Cr as against the earlier ECL model

EAD: Exposure at default = on-balance sheet loan principal + interest

Rationale Behind The 5 Themes

Why Education?

Investing in education from Anganwadis to scholarships, breaks the inter-generational poverty cycle and gives children a pathway beyond subsistence living

Why Health?

Health emergencies are the single biggest trigger of financial distress among low-income households. Preventive care and specialist access protect livelihoods, safeguard loan repayment capacity

Why Livelihood?

Skill development and other related activities reduce dependence on seasonal agriculture and make borrower households genuinely self-sufficient

Why Rural Development?

Our borrowers live in villages with weak civic infrastructure. Strengthening Gram Panchayaths and public institutions builds the ecosystem that enables inclusive economic participation

Why Disaster Relief?

Extreme weather events and public health crisis disproportionately impacts low-income communities. Rapid humanitarian response helps maintain financial stability

1. Portfolio Yield = (Interest on loans – processing fees + Income from securitisation) / Avg. quarterly on-book loans
2. Weighted Avg. COB = (Borrowing cost – finance lease charges) / Daily average borrowings (excl. Financial Liability towards Portfolio Securitized)
3. Marginal COB = (Borrowings availed during the period * interest rate + processing fees and other charges) / Borrowings availed during the period
4. NIM = (NII – processing fees, interest on deposits, income from direct assignment + finance lease charges) / Avg. quarterly on-book loans
5. Cost/Income Ratio = Operating cost / Total Net Income
6. Opex/GLP Ratio = Operating cost / Avg. quarterly GLP
7. ROA = PAT/Avg. Quarterly Total Assets (including direct assignment) (Annualized), ROE = PAT/Avg. Quarterly Total Equity (Annualized)
8. Debt = Debt Securities + Borrowings (other than debt securities) + Subordinated Liabilities + Financial Liability towards Portfolio Securitized
9. GNPA = (Stage III exposure at default) / (Sum of exposure at a default of Stage I + Stage II + Stage III)
10. NNPA = (Stage III exposure at default – Stage III ECL) / (Sum of exposure at a default of Stage I + Stage II + Stage III – Stage III ECL)
11. Provisioning (ECL) = (Stage I ECL + Stage II ECL + Stage III ECL) / (Sum of exposure at a default of Stage I + Stage II + Stage III)
